

Energy Performance Certificate

EPC ASSESS

Flat 12, Redecombe House, 34 Calverley Grove, London, SE28 4QT

Dwelling type	Mid-floor flat	Reference number	8825-1907-4402-9917-3205
Date of assessment	10 July 2025	Type of assessment	RdSAP, existing dwelling
Date of certificate	11 July 2025	Total floor area	54 m ²

This certificate estimates the energy efficiency of this home. The higher the rating, the lower your fuel bills are likely to be. The ratings are compared band by band below: the current rating reflects the home as assessed; the potential rating shows what could be achieved by carrying out the recommended measures on page 3.

Estimated energy costs of this home

	Current costs (3 years)	Potential costs (3 years)	Potential saving
Lighting	£174	£129	
Heating	£1,236	£1,044	
Hot water	£258	£216	
Totals	£1,668	£1,389	You could save £279 over 3 years

These figures show how much the average household would spend for heating, lighting and hot water. They are not based on how energy is used by the people living in this home, and exclude appliances such as TVs and cookers.

About this document

This Energy Performance Certificate was produced following an energy assessment undertaken by a certified domestic energy assessor, accredited by the EPC Assess scheme. A copy has been lodged on the national register. You can obtain further information on the assessment, or raise a complaint, using the contact details below.

Assessor's name	Douglas Trenholm
Assessor's accreditation number	EAS/004417
Company name	Netherfield Energy Surveys Ltd
Phone	020 7946 0871
E-mail	surveys@netherfield-energy.example
Related party disclosure	No related party

About the ratings

The energy efficiency rating is a measure of the overall efficiency of a home on a scale of 1 to 100: the higher the number, the lower the running costs. The environmental impact rating is a measure of the home's impact on the environment in terms of carbon dioxide emissions — again, the higher the rating, the lower the impact. The average rating for a dwelling in England and Wales is band D.

Summary of this home's energy performance related features

Element	Description	Current performance
Walls	Cavity wall, as built, insulated (assumed)	● ● ● ● ○ Good
Roof	(another dwelling above)	—
Floor	(another dwelling below)	—
Windows	Fully double glazed	● ● ● ● ○ Good
Main heating	Boiler and radiators, mains gas	● ● ● ● ○ Good
Main heating controls	Programmer, room thermostat and TRVs	● ● ● ● ○ Good
Secondary heating	None	—
Hot water	From main system	● ● ● ● ○ Good
Lighting	Low energy lighting in all fixed outlets	● ● ● ● ● Very good

Recommended measures to improve this home's energy performance

Recommended measure	Indicative cost	Typical yearly saving	Rating after improvement
Solar water heating	£4,000 – £6,000	£55	C 76
Replace boiler with new condensing boiler	£2,200 – £3,000	£38	B 84

Measures are cumulative: the rating after improvement assumes the measures above it in the table have already been installed. Actual savings depend on how the home is used and on fuel prices.

What can I do today?

- Check that your heating system thermostat is not set too high and that radiators in unused rooms are turned down.
- Wash laundry at lower temperatures and only run full loads.
- Turn off lights and appliances at the wall rather than leaving them on standby.

- Close curtains at dusk to keep heat in, and check that they do not drape over radiators.
