Mr Alastair Penhaligon
Ear, Nose & Throat Department
Southmere Park Hospital
Lakeview Road, London SE28 8WD

Dear Mr Penhaligon,

Re: Mr Theo Marchbank, DOB 1994-03-12
Flat 12, Redecombe House, 34 Calverley Grove, London SE28 4QT
Tel 07700 900418 · Practice ID CP 88412

Thank you for seeing this 31-year-old gentleman, who has presented to us three times since registering with the practice in August 2025 with episodes of acute sinusitis on a background of long-standing nasal obstruction. Each episode has featured frontal facial pressure, purulent nasal discharge and disturbed sleep; the most recent, in late December, required a course of antibiotics.

Theo lived in the United States until June 2025 and was assessed there in October 2024 at Riverside Otolaryngology Associates, where examination demonstrated a leftward septal deviation with inferior turbinate hypertrophy. He reports partial improvement with a steroid nasal spray and saline irrigation, but obstruction of the left nostril has persisted since his return to the UK.

On examination today the septum is visibly deviated to the left with reduced airflow on that side; there are no polyps and no cervical lymphadenopathy. He is otherwise fit and well, a non-smoker, on no regular medication apart from fluticasone nasal spray, and has no known drug allergies.

I would be grateful for your assessment of his recurrent sinusitis and persistent nasal obstruction, and in particular your view on whether septoplasty is now appropriate. He understands the referral pathway and is happy to attend Southmere Park for outpatient review.

Yours sincerely,

Dr Priya Ravensworth
General Practitioner, Calverley Park Surgery
