ABOUT ME

Platform and network engineer with ten years across ISP, hosting and product environments in the UK and US. I like boring, reliable infrastructure: small blast radii, well-understood failure modes and automation that a whole team can operate. Recently returned to London after two years running reliability engineering for a New York property-tech scale-up.

KEY TECHNICAL SKILLS AND INTERESTS

Networking — BGP, OSPF, IS-IS, MPLS, IPv6, DNS, TLS, load balancing, packet analysis

Platform engineering — container orchestration, infrastructure as code, CI/CD pipelines, secrets management

Cloud and virtualisation — public IaaS, private virtualisation clusters, object storage, cost management

Observability and reliability — SLOs and error budgets, metrics/tracing/log pipelines, incident command, postmortems

Languages and tooling — Python, Go, Bash; configuration management; version control and code review workflows

Operating systems — server-grade open-source OS administration, kernel tuning, hardening baselines

RELEVANT PROFESSIONAL EXPERIENCE

Aug 2025 – present	Halewick Systems Ltd, London, UK <i>Senior Platform Engineer</i> • Own the internal developer platform serving 14 product teams; cut median deploy time from 41 to 9 minutes. • Led the migration of build infrastructure to ephemeral runners, halving monthly compute spend. • Introduced a golden-path service template adopted by every new service since October 2025. • Share a five-person on-call rota; wrote the incident-command runbook now used org-wide.
Sep 2023 – Jun 2025	Meridian Loft Inc., New York, USA <i>Senior Site Reliability Engineer</i> • Defined and rolled out SLOs for the booking pipeline; sustained 99.95% availability across 2024. • Re-architected the edge tier across two regions, removing the single point of failure behind three 2023 outages. • Moved all remaining hand-built infrastructure into code review — 100% of production changes peer-reviewed by mid-2024. • Mentored four engineers; ran the weekly reliability review.
May 2019 – Aug 2023	Quillhaven Hosting Ltd, Winchester, UK <i>Systems Engineer, then DevOps Engineer (2021)</i> • Automated provisioning for a 400-host managed-hosting estate; rebuild time fell from days to under an hour. • Built the monitoring and alerting stack that replaced three legacy tools; on-call pages dropped 60%. • Ran the customer-facing status platform and led the incident communications process.
Jul 2015 – Apr 2019	Tarnbeck Networks Ltd, Southampton, UK <i>Network Engineer</i> • Operated an enterprise WAN of 90+ sites; designed and cut over the dual-homed BGP internet edge. • Delivered the IPv6 rollout across the access network. • Second-line escalation for the NOC; wrote the change-control templates still in use when I left.

EDUCATION

2012 – 2015

University of Wexcombe

BSc (Hons) Computer Networks — Upper Second-Class Honours (2:1). Final-year project: resilient campus network design.

PROFESSIONAL COURSES

- Cloud Infrastructure Professional (CIP-2), Aldergate Academy — November 2024
- Advanced Network Automation, Brindlefield Training — June 2021

BEYOND WORK

Homelab tinkering (a small rack I insist is “for learning”), sea swimming, film photography, and volunteering as a coding-club mentor at a local library.

References available on request. Right to work: British citizen; previously held US work authorisation (2023–2025).
